

A gift that does the work *for her.*

Marketing site and gift flow. Ten sections, four breakpoints, the six purchase screens, the First Week Check page, and the motion specified for each.

IN THIS FILE

- The complete page, 375 / 768 / 1280 / 1440
- Hero and its nine-frame storyboard
- Art direction for the shoot
- The style set

SECTIONS IN DEPTH

- Data forward, and why it answers
- Care balance, counted in things
- Packages, with the open state
- First Week Check, section and page

THE GIFT FLOW

- Six screens at phone
- The desktop treatment at 1280
- Chrome, motion and tone
- Every copy flag, named

A GIFT FOR A NEW MOTHER

A gift that does the work *for her*.

For the months after the baby, when everyone is looking at the baby. Nura handles her appointments, her referrals, her recovery. She replies with one word.

SEE THE GIFT →

NEXT — THE PROBLEM, IN HER WORDS

Care mostly stops after the hospital.

The six-week visit comes and goes. The referral nobody chased. The question nobody answered at 2am.

In the months she is least herself, she is the one holding it all.

This is the whole thing.

A text thread, for as long as she needs it. Nothing to install, nothing to log into, nothing to check.

No app.

It works because she lets it.

Her delivery record and her insurance already exist. Here is exactly what Nura does with them, and what it never does.

STAYS WITH HER

- Her delivery record
- Her insurance
- Every message between them

It is read, never shared. Nothing crosses that line, in either direction.

NEVER SEES ANY OF IT

- The giver
- Her doctor
- Anyone else

She can disconnect any time.

CARE BALANCE

Her circle fills it. Nura spends it on her.

Care balance is the friendly name for what her people have funded, and what is still coming. A sister starts it, others add to it, and she never sees a number — she sees what shows up.

She is told who it came from. She is never told what it cost.

HOW THE BALANCE BEHAVES

She is never shown what is left.

She is never asked to add to it.

When it runs low, her circle is told. Only them, and quietly.

The only number she ever sees is the time dinner arrives.

THE PACKAGES

Pick one thing to have handled.

One package, not a basket. Each one is a single thing lifted off her — and every one of them can be changed, paused or refused once it is hers.

FIRST WEEK CHECK

The first week, handled.

Two days after I got home, a message came. Not an app, just a text with my name on it. It already knew the basics from the hospital, so it did not make me repeat anything.

It asked me four things I could tap. I said feeding was hard. I did not have to explain more.

By that evening it had checked what my insurance covered, found a lactation nurse who comes to the house and takes it, and booked her for the next morning. It told my doctor we would do the weights at home.

nurse coming at ten, weights by text, your doctor said okay

It was not an app I had to check. It was someone handling the part I did not have the room to handle.

Written in the first person because that is how it is lived. Nura is nura — this is the week it is built to handle, not a customer's account.

[Read her whole first week →](#)

THE PHYSICAL GIFT

Something to hold.

The wrap, her name stitched inside, in a box with a card in your words.

That is the part you hand over. The companion is what is inside it.

Shot 02 — the wrap as an object, 4:5, folded, her name just legible in the stitch. Art direction on page 1.

CHIP IN TOGETHER

Start it, then send the link.

Her people add to the same one. Nobody assembles anything, nobody is chased for money, and nobody is shown what anyone gave.

Give her the months after, not just the gift.

START A GIFT →

Care mostly stops after the hospital.

The six-week visit comes and goes. The referral nobody chased. The question nobody answered at 2am.

In the months she is least herself, she is the one holding it all.

WHAT NURA DOES

This is the whole thing.

A text thread, for as long as she needs it. Nothing to install, nothing to log into, nothing to check.

No app.

Two days home. Is now a good time?

Feeding is hard

A lactation nurse can come to you Thursday at ten. Booked.

Your referral to the physio went this morning. They have you for the 9th.

Six-week visit, Tuesday 10. Ana comes to hold the baby.

There is a tea on Thursday, five minutes away. No reply needed.

HOW IT KNOWS

It works because she lets it.

Her delivery record and her insurance already exist. Here is exactly what Nura does with them, and what it never does.

01

Can I read your record and your insurance?

yes

She says yes.

Nothing is read until she does. The gift works without it; it just works harder with it.

02

• Her delivery record

• Her insurance

Nura reads two things.

Only these two, and only on her own login. It reads them — it does not take a copy.

03

Six-week visit, Tuesday 10

Dinner at six tonight

Ana comes Thursday

It knows what to check.

The right check on the right day, and every appointment booked is one her plan covers.

STAYS WITH HER

• Her delivery record

• Her insurance

• Every message between them

It is read, never shared. Nothing crosses that line, in either direction.

Pick one thing to have handled.

One package, not a basket. Each one is a single thing lifted off her — and every one of them can be changed, paused or refused once it is hers.

First weeks home

+

from \$300

Pause any week she says we have food.

The Thursday afternoon

+

from \$220

Move the day, or skip it, with one word.

Body back

+

from \$260

Change the practitioner, or stop when she is done.

Head

+

from \$240

Say no to a session without explaining why.

Feed

+

from \$180

However she is feeding, and she can end the check-ins.

Out the door

+

from \$160

Cancel a ride the morning of.

Her table

+

from \$200

Pick who comes, or keep it to herself.

Paperwork

+

from \$140

Hand over only the forms she wants chased.

Clean house

+

from \$190

Choose the rooms. Nobody goes upstairs unless she says.

Sleep

+

from \$280

Swap the nights, or keep the hours short.

Ten in all. She only ever needs one.

She did none of it.

01 Before

0.00 — 1.40s

ON SCREEN	The warm field, empty. The photography plate sits low and unlit at the left. Nothing else is on screen — no logo, no chrome, no caption.
MOTION	Nothing moves. The frame holds so the arrival in Frame 02 has something to interrupt. A 1.4s stillness reads as intentional; anything shorter reads as loading.
TIMING	1400ms · easing —
NOTE	Do not shorten this frame to save time. It is the only reason the rest lands.

02 A message arrives with her name

1.40 — 2.60s

ON SCREEN	One incoming bubble, left-aligned, in the thread column. Her first name is in it. No sender avatar, no notification badge, no application frame of any kind.
MOTION	Bubble: opacity 0 → 1 over 620ms, y +14px → 0, on ease-rise. It does not scale and it does not bounce. Its shadow settles from 0 to its resting value over 420ms on ease-soft, offset 420ms behind the bubble — that delayed shadow is what makes it read as arriving rather than appearing.
TIMING	1200ms · easing ease-rise
NOTE	No typing indicator, no chime. Sound is off by default and the piece must work silent.

ON SCREEN

The photography plate comes up to full. Three unresolved items appear at the right as dashed, unticked rows, each fractionally off-axis. Their copy is Ink 3, not Ink.

MOTION

Plate: opacity 0.55 → 1 over 900ms on ease-soft, with a 1.02 → 1.00 scale on the same curve — a settle, not a zoom. Rows: staggered 130ms apart, opacity 0 → 1, y +14px → 0, 620ms each on ease-rise. Their rotation (−0.8°, +0.6°, −0.5°) is the load; it is removed later, not here.

TIMING

1600ms · easing ease-soft / ease-rise

NOTE

The tilt is the only place the piece is allowed to look untidy. Keep it under 1°.

ON SCREEN

A single outgoing plum bubble: “yes”. The bubble above it drops to 55% so the reply is the only lit thing in the column.

MOTION

Reply: opacity 0 → 1, y +14px → 0, 420ms on ease-rise. The bubble above dims 1 → 0.55 over 420ms on ease-soft, running at the same time. Then the frame holds 580ms before anything resolves.

TIMING

1000ms · easing ease-rise

NOTE

This is the product claim in one gesture — her whole contribution is three letters. Give the hold its full 580ms.

05 The appointment ticks booked

5.20 — 6.80s

ON SCREEN The first row turns over: its dashed rule goes solid hairline, its copy goes Ink 3 to Ink, and a moss tick draws where the empty ring was. No box appears — it stays a line of type. A third bubble explains it in her thread.

MOTION Row: rule and copy cross-fade 420ms on ease-soft; rotation $-0.8^{\circ} \rightarrow 0^{\circ}$ over 620ms on ease-settle. Tick: SVG stroke-dashoffset draws in 420ms on ease-settle, starting 220ms after the rule changes, so the tick reads as the last thing to happen. Bubble: 620ms on ease-rise, starting 220ms after the row.

TIMING 1600ms · easing ease-settle

NOTE The tick is the only moss on screen so far. It is a 14px stroke, never a filled badge.

ON SCREEN	Second row resolves the same way. The thread has begun to scroll: the oldest bubbles are down to 30% and drifting up out of frame.
MOTION	Identical row sequence to Frame 05 — same durations, same curves, no variation. Thread column translates y -14px over 620ms on ease-settle while the top bubble fades 0.4 → 0.3.
TIMING	1400ms · easing ease-settle
NOTE	Reuse the resolve sequence exactly. The repetition is what makes it feel like a system rather than a set of tricks.

07 A walk happens

8.20 — 9.60s

ON SCREEN Third row resolves. All three are now hairline, ticked and square to the grid. In the same beat her own grey question arrives at the bottom of the thread, unanswered — it is the only thing left open on screen.

MOTION Same resolve sequence as 05 and 06. Her grey bubble enters last, 620ms on ease-rise, 220ms after the row settles, and is deliberately left hanging into Frame 08.

TIMING 1400ms · easing ease-settle

NOTE The grey bubble must appear here, not in 08. An answer with no question in front of it reads as a feature, not a reply.

08 The worry clears

9.60 — 11.40s

ON SCREEN Her question from Frame 07 — the 2am one — is answered directly beneath it. Nothing is booked here. This beat is about an answer, not a task.

MOTION Reply enters 620ms on ease-rise. Her grey bubble then warms from Mute to the Paper fill over 900ms on ease-soft — the worry does not disappear, it stops being heavy. Hold 280ms. 620 + 900 + 280 = 1800ms.

TIMING 1800ms · easing ease-soft

NOTE The only frame where nothing is ticked. Resist adding a tick here; being answered is not a task completing.

ON SCREEN

Everything square, everything quiet. The thread settles back to its opening and its close — the first message and the last word — and the three lines hold. “She did none of it.” fades up beneath them in the serif, italic. This composition is the hero poster frame, line for line and bubble for bubble.

MOTION

Intermediate bubbles fade out over 620ms on ease-soft as the column resolves to four. The whole composition then lifts y -14px over 1200ms on ease-settle — the weight coming off, read as the scene rising rather than anything falling — and shadows soften about 20% on the same curve. Caption fades in at 1.10s, 900ms on ease-soft, ending at 2.00s. The final 600ms is dead still. 2000 + 600 = 2600ms.

TIMING

2600ms · easing ease-settle / ease-soft

NOTE

End here and hold. Plays once on load; a quiet Replay appears bottom-right of the stage after the hold, never an auto-loop — a loop turns a moment of relief into a nervous tic.

Motion specification

14.0 seconds, plays once when the stage enters view. Nine beats: a message arrives, the scene beside it, one word back, three things resolve, a worry clears, the weight comes off. Storyboard frames 01–09 sit to the right.

TIMELINE · 14.0S

A plum rule marks the one beat that is her — the one-word reply. A moss rule marks the rest state. Even here the accents are 3px underlines, never fills; the rule holds in documentation as well as on the page.

EASING TOKENS · THREE CURVES, NO OTHERS

ease-rise

cubic-bezier(0.16, 1, 0.30, 1)
Entrances: bubbles, cards, captions. Fast out of the gate, long settle.

ease-settle

cubic-bezier(0.33, 0, 0.12, 1)
Things finding their place: rotation to zero, the final lift, the tick drawing.

ease-soft

cubic-bezier(0.40, 0, 0.20, 1)
Anything that only changes opacity or colour. Never moves anything.

DURATIONS · FOUR VALUES, AND NOTHING IN BETWEEN

220ms	420ms	620ms	900ms+
quick — hover, focus ring, and every offset between two things starting	base — card fills, colour changes, dimming, the tick drawing	calm — every bubble and card entrance, every rotation to zero	long — the plate settling, the worry warming, the final lift at 1200

Every animating duration in frames 01–09 is one of those four. Stagger is always 130ms and offsets are always 220ms. Travel is always 14px — the same distance for a bubble arriving, a card settling and the whole composition lifting. Scale is used exactly once, on the plate in frame 03. Holds are the only free numbers, because a hold is an absence of motion rather than a duration of it.

NEVER, IN ANY FRAME

No overshoot, spring or bounce on any property.	No confetti, sparkle, pulse or looping ambient drift.
No typing indicator, chime, badge or unread count.	No progress bar, counter, or anything resembling a number going up.
No baby, pram, or nursery object enters frame at any point.	No auto-loop. It plays once; a quiet Replay appears after the hold.

HOW IT BEHAVES AT EACH WIDTH

1440+	All nine beats in the right-hand panel, which bleeds to the edge of the viewport and off the bottom. The thread arrives in the device at the left; the things she is no longer chasing resolve into the ledger beside it. The device is sized by its content and never scrolls in the sequence — new bubbles extend it, so it is full at every beat. Shot 01 sits behind; until the shoot lands, window light and grain carry the panel.
1280	Identical sequence and identical composition, stage scaled to 520px tall. No timing changes at all.
768	The panel drops below the copy and bleeds edge to edge, device left and ledger right. The thread runs two messages shorter here so the device does not tower over the ledger beside it — the beats are the same, the tail is trimmed.
375	The device goes — she is holding one, and drawing a phone inside a phone is a picture of a picture. The thread plays directly on the panel, which bleeds edge to edge and stacks: thread, then ledger. The photograph goes too; at 327px the plate would be a stamp, so it returns further down the page as the section's own image. The photograph returns further down the page as the section's own image. Sequence shortens to 11s by trimming the holds, never the entrances.

REDUCED MOTION, AND THE FIRST PAINT

prefers-reduced-motion: reduce — no sequence. The frame 09 composition renders immediately as a still, complete and legible. Nothing is lost: the rest state already says the whole thing. This is the fallback, not a degraded version.

First paint — that same still is the poster image, and it is what every hero artboard shows. It renders with the page; the sequence starts only once the stage is 50% in view. The hero never waits on the animation to become readable.

Text alternative — the stage carries a description for screen readers: “A message arrives with her name. She replies with one word. Her six-week visit is booked, dinners are arriving three evenings a week, and Thursday afternoon is hers.”

BUILD HANDOFF

Everything here is DOM and CSS except the photograph — no video, no canvas. Bubbles, ledger rows and the tick are markup; the tick is a stroked SVG animated on `stroke-dashoffset`. If it is built as Lottie instead, 60fps, and the nine beats stay on the frame boundaries above so either build reads identically. Total motion weight target: under 40KB excluding the photograph.

Photography, art direction

Three frames carry the whole site. They are commissioned, not stocked — every stock library's "new mother" is the thing this brand exists to be the opposite of. Below is what to shoot, how to light it, and where each frame lands.

She is the subject. The baby is never in frame.

Every other rule on this page follows from that one. If a frame would still work on a nursery brand's site, it is the wrong frame.

THE SHOT LIST · THREE FRAMES, IN PRIORITY ORDER

01

SQUARE
1:1 · HERO STAGE

Her, at the window

Early thirties, seated near a large window in late afternoon. The wrap over her shoulders, both hands around a plain ceramic mug. She is looking away, out of frame — not at the camera, not at anything in particular. Tired and unbothered by it. She occupies the left third; the right half of the frame is quiet, empty room.

Why the empty right half: the resolved cards sit there in the hero composition. The negative space is not styling, it is layout — shoot it or the hero does not work.

02

4:5 PORTRAIT
"SOMETHING TO HOLD"

The wrap, as an object

The wrap folded, or held in two hands against a plain surface. Close enough to read the weave and the stitched name inside the hem. One frame of the box open — wrap and card inside, nothing else. Warm light, no props, no baby in frame, no nursery in the background.

This is the only thing you can hold, so it has to be photographed like a considered object — the way a good knitwear brand shoots a coat, not the way a baby brand shoots a blanket.

03

3:2 LANDSCAPE
STORYBOARD 07 · "OUT THE DOOR"

The walk

Her, from behind or three-quarters, walking. Coat or vest, late afternoon, a real street or a park path with bare trees. No pram, no sling, no companion. She is going somewhere on her own for twenty minutes, and the frame should feel like relief rather than achievement.

Optional second plate in the hero animation — storyboard frame 07 cross-dissolves to it over 900ms. If only one frame is licensed, hold frame 01 and the sequence loses nothing.

LIGHT AND GRADE

Source	One window, late afternoon, from camera left. No fill, no reflector, no strobe. The shadow side stays dark.
Lens	50mm, wide open. Shallow enough that the room falls away, never so shallow it looks like a portrait session.
Grade	Warm and desaturated. Black point lifted slightly so nothing is truly black. Clamp the palette to oat, clay and warm off-white — the same family as the page.
Grain	Fine 35mm, matched to the 5.5% grain already sitting on the hero stage so the photograph and the page share one surface.

NEVER IN FRAME

A baby, at any distance	Prams, slings, cots, mobiles
Toys, blocks, soft animals	Pink, pastel, baby blue
Overhead flatlays	A staged smile at camera
Visible branding of any kind	Clinical or hospital settings

Casting: one woman, real postpartum body, minimal hair and make-up, own clothes under the wrap. Shoot in a real home. The moment we art-direct her into looking rested, the site is lying and the reader knows it.

DELIVERY AND CROPS · SHOT 01 MUST SURVIVE ALL FOUR

WIDTH	PLATE	CROP RULE
1440+	608 × 600 · 1:1	Native crop. She sits left of centre; the cards occupy the right 42%.
1280	564 × 520 · 1.08:1	Object-fit cover, focal point 32% / 38%. Loses a little floor, nothing else.
768	672 × 480 · 1.4:1	The widest crop. Shoot with headroom above and floor below so this one does not clip her.
375	Not in the stage	At 327px the plate would be a stamp, so the hero stage carries the thread alone. Shot 01 returns full-bleed at 4:5 in the section below the fold.

Deliver 2048px on the long edge, sRGB, uncropped masters plus the four crops above. Images sit flush in a 2px-radius plate with no border and no overlay text, ever.

INTERIM COMP

Until shot 01 exists, the hero stage is composed to stand without it — window light, grain and a warm field, with the thread bleeding off the bottom edge. That is a real state, not a placeholder: it is what ships if the shoot slips, and it is what renders behind the photograph while the image loads.

Style set

Everything the hero establishes. Each value below becomes one named Figma variable or style. Ten colours, two families, three easing curves, four durations, two shadows, three radii.

COLOUR · THE COMPLETE SET

Ground
#F7F3ED · oklch .966 .010 79
Every page background. Warm off-white, never pure white — white reads clinical, and this is not a health product.

Field
#EFE9E0 · oklch .933 .015 79
Raised surfaces and the fill of anything not yet handled: the animation stage, the data-forward panel, an unresolved card, a message from Nura.

Paper
#FFDFA · oklch .992 .004 90
Only for a real object or a settled fact: a card that is booked, the printed card, a message that has been answered.

Hairline
#E2DAD0 · oklch .881 .018 75
Borders on anything resolved, and the photography plate. 1px, always. There are no 2px borders anywhere on the site.

Mute
#D9CFC3 · oklch .855 .019 75
Dashed edges on what is unresolved, rules under secondary links, and the section cue. The only line lighter than Hairline.

Ink
#1C1A17 · oklch .212 .006 75
Headlines, her words, anything settled. Near-black, warm-shifted. 14.9:1 on Ground.

Ink 2
#55504A · oklch .437 .010 75
Body copy, 7.4:1 on Ground — past AA at every size on the ramp.

Ink 3
#8A8279 · oklch .610 .014 75
Meta, captions, labels, and the copy on anything not yet handled. 4.6:1 on Ground, so never below 11px.

Plum
#4E2A44 · oklch .330 .070 340
The act of giving, and her voice in a thread. The primary button, her outgoing bubbles, one editorial mark per page. Pressed state #3B1F33. Nothing else.

Moss
#6E7A61 · oklch .545 .035 130
Something is handled. The tick, and the eyebrow above a headline. Never a fill, never a badge, never a large area.

 **The accent budget.** Plum and moss together never exceed 5% of the painted area of any screen — roughly what you see in that bar. This is the single rule that makes the palette read expensive rather than merely muted. When a section feels flat, the fix is space and type, never more colour.

TYPEFACE · TWO FAMILIES, AND ONE RULE ABOUT WHO SPEAKS

Aa

Newsreader

Variable, optical size 6–72, weights 300–500 plus italic. Warm, low-contrast, slightly bookish — editorial without being a fashion serif. Fallback: Iowan Old Style, Palatino, Georgia.

Used for **her**: headlines, her words, the First Week Check scene, pull quotes, package names.

Aa

Instrument Sans

Weights 400–600. Neutral, a touch warm, none of the usual software tells. Fallback: Helvetica Neue, Helvetica, Arial.

Used for **Nura**: body copy, what was booked, chased, filed, covered. Labels, navigation, buttons, prices.

THE RULE

Serif is her voice. Sans is the work. The two never mix inside one block of text, and the split is never explained on the page — it just holds, section after section, until the reader feels it. It is what lets the First Week Check page carry a mother's account and a logistics ledger on the same spread without either one flattening the other.

TYPE RAMP · THE FOUR BREAKPOINTS

STYLE	375	768	1280	1440+	SPEC
Display / h1	39	50	62	76	Newsreader 400 · lh 1.08 → 1.04 · tracking −0.015em → −0.021em as it grows
Section head / h2	28	34	40	46	Newsreader 400 · lh 1.14 · tracking −0.015em · first used below the hero
Lead paragraph	16	17	17.5	19	Instrument Sans 400 · lh 1.62 · measure 41–52 characters
Body	15	15.5	16	16	Instrument Sans 400 · lh 1.65 · measure 62–68 characters · first used below the hero
Stage caption	17.5	18.5	18.5	20	Newsreader 400 italic · Ink 2 · the payoff line, and the one italic in the stage
Nav / UI label	—	13.5	13.5	14	Instrument Sans 400 · at 375 the nav is the wordmark and a two-rule menu only
Ledger row	14	14	14	14.5	Instrument Sans 400 · Ink when handled, Ink 3 when not · one hairline above each row
Caption / meta	11.5	11.5	11.5	12	Instrument Sans 400 · lh 1.55 · Ink 3 only · never smaller than 11
Thread bubble	14	13	12.5	13	Instrument Sans 400 · lh 1.5 · 14 at 375 where the thread is on the page itself, smaller inside the device where it is at device scale
Eyebrow	10.5	11	11	11	Instrument Sans 500 · uppercase · tracking 0.18em · Moss
Button	13	13	13	14	Instrument Sans 500 · uppercase · tracking 0.06em · 56px tall on phone

SPACING · BASE 4, AND THE PAGE MARGINS

The scale governs page and section spacing — margins, padding, the distance between blocks. Miniature interface inside the stage illustration (bubble padding, card padding, the gaps between them) is drawn at optical sizes instead, because it is a picture of an interface rather than one.

Section rhythm is deliberately large: 96 between blocks inside a section, 128 on laptop and 160 on wide desktop between sections. On phone both collapse to 64. The white space is doing the work the colour is not allowed to do.

WIDTH	MARGIN	GRID
375	24	4 col · gutter 16
768	48	8 col · gutter 24
1280	64	12 col · gutter 24
1440+	96	12 col · gutter 32 · content caps at 1440

SURFACE

Radius 2px — Everything that is not a message bubble. Square-ish reads editorial; rounded reads like software.

Radius 14px, one corner 4px — Message bubbles only, incoming and outgoing. The one soft shape on the site, reserved for the thread.

Radius 30px — The device in the stage, and nothing else on the site. It appears once per page at most and never at 375.

Lift — 0 14px 34px −22px rgba(28,26,23,.32). For the package card open state below the fold. Never on buttons, never on hover.

Lift, deep — 0 24px 60px −30px rgba(28,26,23,.30). The device only. It sits above the photography plate, so it needs the longer throw to read as an object rather than a pane of glass.

Primary button — Plum on Ground. 20/40 at 1440, 20/32 at 1280 and 768, full width at 56px on phone. Hover darkens to #3B1F33 over 220ms. One per screen.

Start a gift

Secondary — Plum text on a 1px Mute underline. There are no outline buttons anywhere on the site.

Two rules for the stage. The device is sized by its content — it has no fixed height, so it can never be half full. A shell with dead space in it reads as a pane of glass rather than a thing someone is holding, and that one detail decides whether the whole panel looks expensive. And nothing that is handled is ever a card: they are rows of type under hairlines, with the detail right-aligned. Three bordered boxes with drop shadows in a row is a dashboard, and dashboards are on the banned list.

Photography — one image per section at most, warm low light: her hands, her back, her at a table. No baby in frame, no pram, no nursery. Images sit flush in a 2px-radius plate with no border and no overlay text. Every plate in these artboards is a marked placeholder; nothing is licensed yet.

It works because she lets it.

Her delivery record and her insurance already exist. Here is exactly what Nura does with them, and what it never does.

01

Can I read your record and your insurance?

yes

She says yes.

Nothing is read until she does. The gift works without it; it just works harder with it.

02

• Her delivery record

• Her insurance

Nura reads two things.

Only these two, and only on her own login. It reads them — it does not take a copy.

03

Six-week visit, Tuesday 10

Dinner at six tonight

Ana comes Thursday

It knows what to check.

The right check on the right day, and every appointment booked is one her plan covers.

STAYS WITH HER

- Her delivery record
- Her insurance
- Every message between them

NEVER SEES ANY OF IT

- The giver
- Her doctor
- Anyone else

It is read, never shared. Nothing crosses that line, in either direction.

She can disconnect any time.

It works because she lets it.

Her delivery record and her insurance already exist. Here is exactly what Nura does with them, and what it never does.

How this section earns trust

THE APPROACH, IN ONE LINE

Answer the question instead of reassuring her about it — three plain steps for what she shares and what it buys her, then a line with the people who never see any of it named on the far side.

WHY IT IS BUILT THIS WAY

A trust section fails when it argues. The moment a page starts reassuring you about safety it has told you there is something to fear, and a mother two weeks postpartum has neither the attention nor the patience for a defence. So this section makes no case at all. It answers three questions in order — *who decides, what is read, what does she get* — and then names, in plain words, the people who never see any of it.

Nothing is abstracted. Step 02 shows the two records as two chips, because two is the whole list and a short list of real things is more reassuring than any assurance about it. Step 03 shows what came back as the actual messages, in the same bubbles the hero uses, because a description of a benefit is worth less than the benefit itself sitting on the page.

The hardest sentence in the brief is “not with the giver.” The person reading this page *is* the giver, and they are about to spend money. Telling them plainly that they will never see any of it is the single most trust-building thing the section does, so it is set as its own block rather than buried in a paragraph.

SEQUENCE · TRIGGERED ONCE WHEN THE SECTION IS 40% IN VIEW

- 1

Heading, then the line beside it

Opacity 0 → 1, y +14px → 0, 620ms on ease-rise. The eyebrow goes first, alone, 220ms ahead.
- 2

The three steps, in order, never together

Each step's rule draws left to right, 620ms on ease-settle. Its number fades in behind it, then the picture, then the title and line — 620ms each on ease-rise, 130ms apart. Steps are 220ms apart, so the reader is carried 01 → 02 → 03 rather than shown a row of three things at once. Inside step 01 the question arrives first and “yes” follows 420ms later; that gap is the consent, and it is the only place in the section where the timing is doing an argument's work.
- 3

The line, before the people on the far side of it

The heavy rule draws first, 620ms on ease-settle. “Stays with her” and its three items fade up, 130ms apart. Then the dashed divider draws top to bottom over 900ms. Only once it is fully drawn do the three names on the other side appear, 620ms each, 130ms apart, and at Ink 3 rather than Ink. The barrier exists before the people do. That order is the entire reassurance, and reversing it would undo the section.
- 4

The last line

620ms on ease-rise, after a 420ms hold. “She can disconnect any time” is the last thing that moves in the section, which is the point of putting it last.

About 5.4s end to end. Same three easing curves and four durations as the hero — this section introduces no new motion vocabulary, because a section about trust is the worst possible place to start behaving differently.

NOT SCROLL-SCRUBBED

The brief says “drawn as it scrolls in,” and the obvious reading is to tie the draw to scroll position. Don't. Scrubbed motion runs at the reader's scroll speed, so a fast flick makes the calmest moment on the site snap and a slow one makes it stutter. It plays once on entry, at its own pace, and finishes whether she keeps scrolling or not.

NEVER, IN THIS SECTION ABOVE ALL

- No padlock, shield, key or fingerprint.

No server, cloud, node or network diagram.
- No “encrypted”, “secure”, “bank-level”, “compliant”.

No toggles or switches — this is a page, not settings.
- No trust badges, seals, or percentages.

No red, and no warning tone on the far column.
- No crosses or strike-throughs on the three names.

No green. Moss appears only on what stays hers.

Every one of those is the reflex move for a data section, and every one announces risk. The three names get a quiet dash, not a cross: a cross says something was refused, a dash says it was simply never on the list.

REDUCED MOTION, AND ONE FLAG FOR THE CLIENT

- prefers-reduced-motion: reduce — the section renders complete, rules already drawn. It loses nothing: the order was a courtesy to the reader, not the argument. The argument is the words and the line, and both are there in the still.

Screen readers — the three steps are a numbered list, and the boundary is two lists with their headings read out: “Stays with her”, three items; “Never sees any of it”, three items. No part of the meaning lives in the dashed line alone.

Copy flag. Step 03 uses the brief's “who her plan covers.” The packages sheet lists *plan* as a word to avoid in its subscription sense; here it plainly means her insurance, so it reads clean, but “her insurance covers” is a one-word swap if it should go.

Her circle fills it. Nura spends it on her.

Care balance is the friendly name for what her people have funded, and what is still coming. A sister starts it, others add to it, and she never sees a number — she sees what shows up.

She is told who it came from. She is never told what it cost.

WHAT HER PEOPLE HAVE FUNDED

already arrived

still coming

Dinners that arrive

Priya, and three others

A sitter who comes

Her mum

A visit that gets booked

The Thursday group

Nura spends it as it is needed.

No one is shown what anyone gave

She is never shown what is left.

She is never asked to add to it.

When it runs low, her circle is told. Only them, and quietly.

The only number she ever sees is the time dinner arrives.

Her circle fills it. Nura spends it on her.

Care balance is the friendly name for what her people have funded, and what is still coming. A sister starts it, others add to it, and she never sees a number — she sees what shows up.

She is told who it came from. She is never told what it cost.

A visit that gets booked

☒☒☒

The Thursday group

Nura spends it as it is needed.

No one is shown what anyone gave

HOW THE BALANCE BEHAVES

She is never shown what is left.

She is never asked to add to it.

When it runs low, her circle is told. Only them, and quietly.

The only number she ever sees is the time dinner arrives.

Her circle fills it. Nura spends it on her.

THE APPROACH, IN ONE LINE

The balance fills as tokens, never as a figure — a meal, an afternoon, a visit — and the only person on the page who never sees it is her.

WHY IT IS BUILT THIS WAY

The brief asks for the balance to fill *as small tokens — a meal, a visit, an afternoon — not as a dollar figure*, and that instruction decides the whole section. Every default way of drawing a balance is a way of drawing money: the progress bar, the goal, the thermometer, the running total. Each one turns her recovery into a target somebody is behind on. So nothing here is a quantity. It is an inventory, counted in the things themselves, the way you count what is left in a cupboard.

The tokens are spaced so they read as separate objects rather than segments of a bar, and no two rows share a total — a shared denominator is exactly what makes a row look like progress toward a goal. Four dinners is not 66% of anything. Hollow is what has already arrived and solid is what is still coming, running left to right because that is the direction time runs. Depletion is not loss here: a token going hollow means somebody was fed.

The strip at the top is the brief's own sentence made into objects — *a sister starts it, others add to it, and it turns into dinners that arrive*. Two chips and a message. The first two are set in the system's sans because they are things people do; the third is the serif-page's message bubble, the same one the hero uses, because it is the only one of the three she ever sees. That change of voice is the transformation, and it does the work no arrow could.

The line under the strip is the section's rule: names travel, amounts never do. She is told who it came from, because knowing your sister fed you *is* the gift; she is never told what it cost, because that is what turns a gift into a price list.

The last of the three behaviours is the real argument. Somebody has to watch the balance and it must not be her. Telling her circle when it runs low — quietly, and only them — is what stops a gift from becoming a bill she is behind on. It is also the answer to the obvious objection about the panel above: on this page the reader *is* the circle, so showing it to them is correct. Showing it to her would not be.

SEQUENCE · TRIGGERED ONCE WHEN THE SECTION IS 40% IN VIEW

- 1

Heading, then the line beside it

Opacity 0 → 1, y +14px → 0, 620ms on ease-rise. The eyebrow goes first, alone, 220ms ahead. Same opening as every other section on the page.
- 2

The strip, read like a sentence

Three objects, never together. “Her sister starts it” fades up at 620ms on ease-rise. Its rule draws left to right over 620ms on ease-settle and “Eleven others add to it” lands as it arrives; the second rule follows the same way. Then **nothing for 420ms** before the message rises. That hold is the only place in the section where waiting does the argument's work — the beat between what was funded and what showed up is where the money stops existing. Close it and the strip reads as a checkout.
- 3

The balance filling, one token at a time

This is the beat the brief specifies. The heavy rule draws first, 620ms on ease-settle. Rows arrive top to bottom, 130ms apart. Inside a row the hollow tokens come first — what has already arrived — then the solid ones, 90ms apart, left to right, each its own 220ms fade. The row is never one element growing in width: a thing growing in width is a bar, and a bar is a budget. Row stagger is capped at 540ms so the longest row does not outrun the next one starting.
- 4

The three rules, and the third one alone

620ms each on ease-rise, 130ms apart, rules drawing under each. The third line — *when it runs low, her circle is told* — waits an extra 220ms after the second. It is the section's point and it is allowed the room. The closing serif line follows at 900ms, y +10px only.

LIVE BEHAVIOUR · WHEN SOMEONE ACTUALLY ADDS

One new solid token appears at the end of its row, 420ms on ease-rise, and the row's names update. That is the entire event. No figure counts up, no total re-renders, no sound, no celebration. Somebody quietly put a dinner on the shelf; the page should behave the way a person would. When Nura spends one, the token goes hollow in place over 420ms — it does not leave the row, because what she was given did not stop having happened.

NEVER IN THIS SECTION

No currency symbol, anywhere, in any state — including empty states and error copy. No progress bar, percentage, goal, target, thermometer or countdown. No amount next to anyone's name, and no ordering of givers by how much they gave. No confetti or scale-up when a gift lands. No red, and no low-balance warning that can ever reach her screen. No “only two left” urgency written at her.

REDUCED MOTION

prefers-reduced-motion: the arrow is drawn at rest, every mark is present, and the three rules cross-fade in at 220ms with no travel. Nothing is lost — the section is legible as a still, which is how it is designed and how it appears in the storyboard.

ACCESSIBILITY

The marks are decorative individually and hidden from the reader; the row carries the meaning as a label — “Dinners that arrive: two already arrived, four still coming.” Plum on field clears contrast at this size, but the hollow token's hairline does not, which is why quantity is never carried by the token alone. The legend sits above the first row rather than below the last, so it is read before it is needed.

COPY FLAGS FOR THE CLIENT

The heading is the brief's, verbatim. The three things are the brief's three, in its order — dinners that arrive, a sitter who comes, a visit that gets booked — and the layout holds any three to five of them, breaking at seven.

One deliberate departure: the brief's line is “she never sees a wallet or a number.” *Wallet* is on the banned list in the packages sheet, and a banned word does not become safe by being negated — putting it on the page is still the only time a reader meets it. The idea survives intact as “she never sees a number,” and the three behaviour rules carry the rest. “Amount” and “cost” appear once each, in the negative, for the same reason.

THE PACKAGES

Pick one thing to have handled.

One package, not a basket. Each one is a single thing lifted off her — and every one of them can be changed, paused or refused once it is hers.

First weeks home

from \$300

Pause any week she says we have food.

+

The Thursday afternoon

from \$220

Move the day, or skip it, with one word.

+

Body back

from \$260

Change the practitioner, or stop when she is done.

+

Head

from \$240

Say no to a session without explaining why.

+

Feed

from \$180

However she is feeding, and she can end the check-ins.

+

Out the door

from \$160

Cancel a ride the morning of.

+

Her table

from \$200

Pick who comes, or keep it to herself.

+

Paperwork

from \$140

Hand over only the forms she wants chased.

+

Clean house

from \$190

Choose the rooms. Nobody goes upstairs unless she says.

+

Sleep

from \$280

Swap the nights, or keep the hours short.

+

Ten in all. She only ever needs one.

THE APPROACH, IN ONE LINE

Every closed card leads with what she can refuse, and the open state ends by showing her saying one word — so the depth the brief asks for is depth about her control, not about features.

WHY IT IS BUILT THIS WAY

The brief asks for quiet cards and says the open state “is where the depth lives.” The risk in a ten-card grid is that it becomes a pricing table, which is the one thing this brand cannot be. Three defences: paper surfaces with a hairline and no shadow, never a fill or a border that competes; the price set small and grey, below the name rather than beside it, so it is available but never the headline; and no card marked recommended, best value or most popular. Nothing on this page ranks the packages against each other.

The closed card carries the brief's one-line “she can change” note, and that choice does most of the work. Every other gift site teases a package with what you get. Here each card teases with what she is allowed to refuse — *pause any week she says we have food, say no to a session without explaining why, nobody goes upstairs unless she says*. Ten cards read in a row become one argument: this is a gift that can be turned down in pieces, and that is what makes it safe to accept.

The open state answers the brief's three questions in its order — what it is, what is included, what she can change — and then does one thing the brief's copy implies but does not ask for. “She never composes; she just replies” is shown rather than claimed: a message and a one-word answer, in the hero's own bubbles. That exchange is the last thing in the panel before the button, so the final impression before someone spends money is her, not the product.

“What it is” is set in the serif at full width, alone. It is the only sentence in the panel a reader must take in, and the two columns beneath it are for the reader who wants more. Someone who reads that one line and presses the button has understood the package correctly.

SEQUENCE · THE GRID ARRIVING

- 1

Heading, then the line beside it

Opacity 0 → 1, y +14px → 0, 620ms on ease-rise; eyebrow 220ms ahead. The same opening as every other section.
- 2

Cards rise in a gentle stagger

The brief's instruction, taken literally and kept slow. Each card: opacity 0 → 1, y +12px → 0, 620ms on ease-rise. Stagger is 90ms, ordered by row and then by column, so the grid fills the way a page is read rather than in a diagonal sweep. Ten cards at 90ms is 810ms of stagger — short enough that the last card is not still arriving when the reader has reached it. Rows below the fold trigger on their own as they enter, never all at once on load.

SEQUENCE · THE OPEN STATE EXPANDING

- 3

The card becomes the panel

On desktop the card expands to the full width of the grid and the rest of its row moves down; it does not open as an overlay, because an overlay would hide the other nine and the point is that she only needs one of them. Height animates 620ms on ease-settle, width 420ms, both starting together so the panel widens slightly ahead of its own height. The surface crossfades paper → field over 220ms, and the plus becomes a minus by the vertical stroke scaling to zero on ease-settle.
- 4

The contents, after the box has finished

Nothing inside fades in until the panel has reached its height. Then: the rule under the header draws left to right, 620ms on ease-settle; “What it is” rises, 620ms; the two columns follow 130ms apart, with the Included rows at 90ms each; and the exchange last — the question, then a 420ms hold, then “yes”. Content appearing while the box is still growing is what makes an accordion feel cheap, and the hold before her reply is the same beat used in care balance.
- 5

Closing, and one at a time

Only one card is ever open. Opening a second closes the first in the same gesture: the old panel collapses on ease-settle at 420ms while the new one expands, and the page scrolls to keep the new card's top edge where the old one's was, so the grid never jumps under the reader's hands. Closing reverses the expansion at 420ms — quicker than opening, because nobody needs to watch something they have dismissed.
- 6

Phone — a detail view, not an accordion

At 375 the card opens as its own screen, pushed in from the right over 420ms on ease-settle, with the list behind it holding still rather than sliding. The back control returns the reader to the grid at the same scroll position, with the card they opened briefly carrying a field tint so they can find their place. The button is sticky at the bottom of the viewport and 56px tall: everything on this screen is reachable one-handed, which is the brief's rule for the whole site.

NEVER IN THIS SECTION

No card marked recommended, popular or best value, and no ordering by price. No badges, ribbons, strikethroughs or “was/now”. No countdown, no scarcity, no number of gifts bought this week. No card that grows, lifts or shadows on hover — the hairline darkens to Ink 3 and the cursor changes, and that is the entire hover state. No accordion that bounces. No package shown as unavailable to make another look better.

REDUCED MOTION

prefers-reduced-motion: cards are present on load with no rise and no stagger; the panel opens with height animation only, 220ms, and its contents are there when it lands; the phone detail view crossfades instead of pushing. Nothing is lost, because every state here is designed to read as a still.

ACCESSIBILITY

Each card is one control, not a card with a button inside it — the whole surface is the target, which is also what makes it work one-handed. The plus is decorative; the control announces its own expanded state and the panel is labelled by the package name. Focus moves to the panel heading on open and returns to the card on close. The ten cards are a list, so a reader arriving by keyboard is told there are ten before they start. Price is never conveyed by position or colour alone.

COPY FLAGS FOR THE CLIENT

The heading is the brief's, verbatim. All ten package names are the brief's, in its order. The open state uses the brief's example copy for First weeks home word for word, including “she never composes; she just replies”.

Two things here are mine and need confirming against the packages sheet: the nine remaining “she can change” lines, written to the brief's instruction that each card carries one; and every price except the \$300 the brief states. The prices are placeholders chosen to sit in a plausible range — the layout holds three digits and will need revisiting at four.

One layout note for later: “Included” lists four items here. The row treatment holds three to six cleanly and starts to unbalance the two columns at seven, at which point the Included column should take the full width above the other two rather than growing taller.

Pick one thing to have handled.

Six screens, one decision each

THE APPROACH, IN ONE LINE

Keep her on the screen the whole way through — the money is asked for once, at the end, and every step before it shows what the money turns into rather than what it costs.

WHY IT IS BUILT THIS WAY

A gift like this is bought by someone who is worried about a friend and slightly unsure whether the gesture is welcome. Every extra decision is a chance to reconsider. So each screen carries exactly one, the page never scrolls sideways into options, and the two screens that could balloon — add-ons and the optional fields about her — are both explicitly refusable on the screen itself rather than in a footnote.

The flow inherits the marketing page's rule that money is shown as things. Step 2 is the hinge: the amount goes up, and what changes on screen is the number of dinners, not a total. Those are the same tokens as the care balance section, so the giver has already learned to read them before they get here. It is also the last time the number moves — by step 6 it is a line in a summary, not a decision.

Step 4 is the flow's trust moment and it is built like the data forward section: every optional field carries a one-line reason underneath, in the brief's words, saying what it makes Nura better at. Nothing is asked for without saying why, and the screen closes by naming who does not see it — the people adding to the gift. A form that explains itself field by field is the only kind a tired person will finish.

Step 5 shows the card as it will print, in the serif, on paper, with a shadow — the only real shadow anywhere in this system. It is there because it is the one physical object the giver makes, and seeing it set makes people write a better line than an empty box does.

THE CHROME, SHARED BY ALL SIX

- 375 — as delivered**

Back control and “n of 6” on one line, then a one-pixel rule across the full width with the completed fraction in Ink and the rest in Mute. It is a progress rule, not a bar: no fill colour, no percentage, no animation on load. The primary action is sticky at the bottom, 56px, always within thumb reach, and any secondary action (“Skip this”, “See all ten”) sits centred beneath it as a text link so the two can never be confused.
- 1280 and 1440 — the treatment on the artboard beside this one**

The rule becomes named steps in the header — Package, Amount, Add-ons, About her, The card, Pay — because at this width there is room to say where you are instead of counting. Content splits seven-to-four: the decision on the left at a 520–560px measure, and a summary rail on the right in Field, holding what the gift is so far and the share link, with the primary action at its foot. The rail is sticky; the left column scrolls. At 1440 the measure and the rail grow, the margins go to 96px, and nothing reflows.
- 768 — neither one**

Named steps are kept, but the rail is not: at this width a four-column rail squeezes the decision. Single column at a 560px measure against a 48px margin, and the summary collapses into one line directly above the sticky action — “First weeks home · \$300 · one add-on” — expandable by tap. The action stays sticky here too; a tablet is still held.

NOTES PER SCREEN

- 1

Pick a package

The region selector sits above the cards, on its own rule, as a plain line of type with a chevron — not a flag, not a globe, not a dropdown that looks like a form control. Changing it re-renders every price in place with a 220ms crossfade and no layout shift, which is why prices are set on their own line rather than beside the name. The card the reader opened on the marketing page is already open here, exactly as they left it; the brief asks for that carry-in and it is the reason this screen does not feel like starting again. “See all ten” under the action expands the list rather than navigating away.
- 2

Set the amount and open a pool

Stepper, not a slider: a slider invites fiddling and gives a false sense that any number is as good as another. Each press moves the amount one tier and one token appears or goes hollow, 220ms on ease-rise, with the sentence beneath rewriting itself on the same beat. The share link is live before payment, because the brief's model is that her people add to the same gift — the pool has to exist before it can be filled.
- 3

Add one more thing

Three, never more, and never a builder. “Skip this” is a peer of the primary action, not hidden in the corner, and the closing line says she can decline any of them once it is hers. Selecting fills the circle with Moss and a tick at 220ms; the running total on desktop updates in the rail rather than animating on the row.
- 4

Tell Nura about her

Hairline fields, no boxes: a filled field carries an Ink rule, an empty one carries Mute, and that is the only difference. Required above the divider, optional below, and every optional field has the brief's one-line reason under it. Validation is never red and never inline-as-you-type — it appears on blur, in Ink 2, as a sentence: “This needs a mobile Nura can reach her on.”
- 5

Write the card

The preview updates as they type, one line behind, set in the serif at print proportions. No character counter until 40 characters remain, and then in Ink 3, never red. The two delivery options reuse the add-on row exactly — same circle, same tick — so a control learned on screen 3 still means the same thing on screen 5.
- 6

Pay

Stripe Elements styled to the same hairline fields, so the payment step does not visually change hands. Summary first, then the card, then one button that says the amount out loud. The closing line does the last piece of trust work — Stripe takes the payment, Nura never sees the card, and her people never see what this giver gave.

MOTION ACROSS THE FLOW

Forward is a 280ms push from the right on ease-settle, back is the same in reverse; the header and the sticky action do not move, so only the middle changes and the frame stays still. The progress rule extends to its new fraction over 420ms on ease-settle, starting as the new screen lands rather than before it. Nothing else animates between screens — no fading numbers, no counting totals, no success flourish after payment. The confirmation is a screen, not an effect.

NEVER IN THE FLOW

No red, anywhere, including validation and card errors. No countdown, no “3 people are viewing this”, no cart-abandon nudge, no default-on add-ons. No upsell after the package is chosen beyond the three the brief allows. No account, no password, no marketing opt-in pre-ticked, and nothing that asks the giver to make one for her. No progress bar that fills with colour. No celebration animation on payment — somebody's friend has just had a baby and is not sleeping; the tone at the end is relief, not confetti.

ACCESSIBILITY

Every step is a page with its own heading and title, so back and forward behave and a screen reader announces the move. The progress rule is decorative; “Step 2 of 6” carries it in text. Fields have real labels above them, never placeholders doing a label's job, and each optional field's reason is associated with its input rather than floating beside it. The stepper announces the new amount and the new sentence together. Every target on 375 clears 44px, and the whole flow is operable one-handed with the phone in the left hand — the back control top-left is the only exception, which is why nothing destructive lives there.

COPY FLAGS FOR THE CLIENT

All six step names are the brief's. The package names and the First weeks home content are the brief's. The three add-ons are the brief's — an extra week of dinners, one more sitter afternoon, a lactation visit.

Mine and needing confirmation: every price, the three optional fields on step 4 and their reasons, the validation wording, and the Stripe line on step 6. Prices are shown for the United States so they match the marketing page; the region selector is what makes them change, and a second region is worth rendering before handover to prove the line does not reflow.

One open question for the client: step 2 creates a shareable pool before payment. If the pool can be opened without the first giver paying, the share control belongs on step 2 as drawn; if it cannot, it moves to the confirmation screen and step 2 keeps only the amount. That is a product decision, not a design one, and the layout survives either.

FIRST WEEK CHECK

The first week, handled.

HOW THE FIRST WEEK GOES

Two days after I got home, a message came. Not an app, just a text with my name on it. It already knew the basics from the hospital, so it did not make me repeat anything.

It asked me four things I could tap. I said feeding was hard. I did not have to explain more.

By that evening it had checked what my insurance covered, found a lactation nurse who comes to the house and takes it, and booked her for the next morning. It told my doctor we would do the weights at home.

nurse coming at ten, weights by text, your doctor said okay

It was not an app I had to check. It was someone handling the part I did not have the room to handle.

Written in the first person because that is how it is lived. Nura is new — this is the week it is built to handle, not a customer's account.

FIRST WEEK CHECK

The first week, handled.

One week, told from the inside. Then, plainly, what happened behind it.

Written in the first person because that is how it is lived. Nura is new, so this is the week it is built to handle rather than a customer’s account. When there are real ones, they will run here instead, with her name on them.

HOW THE FIRST WEEK GOES

Two days after I got home, a message came. Not an app, just a text with my name on it. It asked if now was a good time. It already knew the basics from the hospital, so it did not make me repeat anything. It asked me four things I could tap: how I was feeling down there, how feeding was going, whether the pediatrician wanted the baby back for a weight check, and who was with me that day.

I said feeding was hard and the pediatrician wanted us back in two days to weigh her again. I did not have to explain more.

It wrote back that I did not have to keep going in. It asked if it could find someone to come to me instead. I said yes. By that evening it had checked what my insurance covered, found a lactation nurse who does home visits and takes my plan, and booked her for the next morning. It told me my state has a free nurse who comes to the house in my county and signed me up for that too. And it sent my pediatrician a note saying we would weigh the baby at home and report the numbers, so nobody was waiting on us to drive in. It asked me to confirm the pediatrician was fine with it, and once they were, it told me in one line: nurse coming at ten, weights by text, your doctor said okay.

For the next two weeks I just texted the baby’s weight when I had it. It watched the trend. It told me when we were past the worst of it. I did not fill out a single form. I did not make a single call. I did not sit on a directory at two in the morning trying to figure out who took my insurance.

That was the week I understood what this was. It was not an app I had to check. It was someone handling the part I did not have the room to handle.

WHAT HAPPENED BEHIND THAT

Everything above took her four small actions. Here they are beside the week of work they set off.

SHE DID FOUR THINGS

Answered four questions, by tapping

Said feeding was hard

Said yes to someone coming

Texted a weight when she had it

NURA DID ELEVEN

Read the hospital discharge summary before asking her anything

Asked only the four things it could not already know

Offered to find someone who could come to her instead

Checked what her insurance actually covered

Found a lactation nurse who visits at home and takes it

Booked her for the next morning

Found the free nurse visit her county runs, and signed her up

Sent her pediatrician a note about weighing at home

Waited until the pediatrician agreed

Sent her one line: nurse at ten, weights by text, your doctor said okay

Watched the weights for two weeks, and told her when it was over

If she had said something that needed a doctor that day, the week would have gone differently. It would have told her to call, given her the number, and sorted the ride and someone to hold the baby while she went.

One message to her. A week of work behind it that she never sees.

START A GIFT →

FIRST WEEK CHECK

The first week, handled.

One week, told from the inside. Then, plainly, what happened behind it.

Written in the first person because that is how it is lived. Nura is new, so this is the week it is built to handle rather than a customer's account. When there are real ones, they will run here instead, with her name on them.

The first week, handled.

THE APPROACH, IN ONE LINE

Get out of the way of the copy — her account is the strongest asset this brand has, so the section is nothing but type, and the page's one piece of design is four things she did set beside eleven she never saw.

WHY IT IS BUILT THIS WAY

The brief's motion note is “quiet; let the words carry it,” and that is a licence worth taking literally. Every other section on this page argues with a diagram. This one has no diagram, no device, no panel, no accent — a heading, her account in the serif at 25px, one message bubble, and a link. It is the only section that is purely typographic, and the contrast is what gives it the “real space, not a footnote” the brief asks for. Nothing here needed inventing; it needed room.

The compressed version keeps three beats and cuts the rest: the message arriving and already knowing, the four taps and one honest answer, and the evening it produced a booked nurse. Everything trimmed is detail, not proof. The line that closes it — *it was not an app I had to check, it was someone handling the part I did not have the room to handle* — is the single best sentence in all three documents, so it is set largest, alone, above the link.

On the page itself the scene runs in full, verbatim, and then the one designed idea: her four actions in a narrow column beside Nura's eleven in a wide one. The columns are deliberately unequal and the short one is allowed to end early, leaving white space where her week would have been. That gap is the product. It is the same argument the hero makes with “she did none of it,” made once more with evidence.

WHAT WAS CUT, AND WHY — READ THIS BEFORE PUBLISHING

The source document carries material that should not reach a public page, and the design brief's own instruction is explicit: nothing about vendors, pricing math, clinical plans or medical records beyond the one data forward paragraph goes to whoever builds this. Three cuts were made on that basis, and none of them are stylistic.

- 1

The named state program

Her account names a specific county programme and its rollout schedule. On the page it reads “my state has a free nurse who comes to the house in my county” — true, hers, and it does not commit the client publicly to one vendor's coverage map or date. If legal wants the name back in, it is one string.
- 2

The clinical thresholds and the escalation protocol

Weight-loss percentages, day-14 triggers, tear grading, the fax to the pediatrician. A marketing page that prints thresholds is making a clinical promise in public, and this one is bought by a sister, not a clinician. The substance survives as one plain paragraph in a quiet panel: if she had said something that needed a doctor that day, it would have told her to call, given her the number, and sorted the ride and the cover.
- 3

“Why nobody else sells this”

Competitor positioning and hourly rates, ending with “that is the sentence to test in the debut.” That is a note to the founders, not page copy. Cut entirely. It is also the passage most likely to be pasted onto a page by mistake, which is why it is named here rather than quietly dropped.

ONE WORD KEPT ON PURPOSE

“App” is a word this brand otherwise avoids, and it appears twice — *not an app, just a text*, and *it was not an app I had to check*. Both are in her voice, both are negations, and both are doing the positioning the whole site depends on: naming the thing Nura is not. That is the opposite of the wallet on the care balance section, which was a banned word used in a sentence that survived without it. Here the sentence is the point. Kept, verbatim, and flagged so the decision is visible rather than accidental.

MOTION · QUIET, PER THE BRIEF

- ### The section on the landing page

Heading and eyebrow as everywhere else. Her paragraphs rise one at a time, 620ms on ease-rise, 220ms apart — slower and further apart than any other section, because the pace is the tone. The bubble arrives last, after a 420ms hold, on the same timing the hero uses for a message landing. The pull line and the rule beneath it come together. Nothing moves twice, nothing loops, and there is no parallax.
- ### The page

The scene does not animate at all beyond a single fade on load — a long passage that reveals itself paragraph by paragraph as you scroll is an effect, and this copy does not need help. The one sequenced moment is the comparison: her four rows arrive first, 130ms apart, then a 420ms pause, then Nura's eleven at 90ms. Her column finishes early and visibly waits while the other keeps going. That pause is the entire piece of design on the page, and reversing the order or overlapping them loses it.

NEVER IN THIS SECTION OR ON THIS PAGE

No photograph behind her words — a face turns testimony into an advertisement. No quotation marks, no pull-quote frame, no italic set of the whole passage; it is her account, not a review. No star rating, no “real customer”, no verification badge. No accent colour in the scene at all — the only colour on the page is the moss eyebrow, the plum label over Nura's eleven, and the button.

ACCESSIBILITY AND STRUCTURE

The page is one article with a single h1 and two h2 sections, so it is readable end to end without the layout. The comparison is two lists, each with its own heading that carries the count in words — a reader who cannot see the columns still gets “she did four things” and “Nura did eleven”, which is the whole argument. Measure is held at 820px on the scene: long-form copy at 1440 without a measure is unreadable, and this is the one page people will actually read.

COPY FLAGS FOR THE CLIENT

The heading is the brief's. The scene is the First Week Check document's, verbatim except for the one programme name. The closing line is the document's own summary sentence.

Mine: the standfirst, the eleven-item breakdown (drawn from the behind-the-scenes passage and rewritten in plain words), the escalation paragraph, and the compressed three-paragraph version used in the landing section. All of it should be read back against the clinical partner before it ships, because this is the one page where a design decision and a medical claim are the same sentence.
